DETAILED ACTION

The following is a statement of reasons for the indication of allowable subject matter. The present invention is directed to an audio apparatus and a method of designing an audio apparatus. Independent claims 1 and 12 identify the uniquely distinct feature of a piezoelectric transducer embedded in a casing of soft material and mounted in a housing of hard material coupled to a user's pinna such that a cavity is defined between the casing and housing and the parameters of the casing, cavity and housing reduce unwanted radiation in combination with all the disclosed limitations of claims 1 and 12. The closest prior art, Whitwell et al. (US 2002/0039427) teaches a piezo transducer coupled to a user's pinna but fails to teach a soft casing in a hard housing selected to reduce unwanted radiation; White (US 2,045,427) disclose a bone conduction hearing aid peizo transducer in a soft casing and covered with a hard housing but fails to teach the transducer in contact with the user's pinna or the parameters of the casing selected to reduce unwanted radiation. The prior art fails to anticipate or render the independent claims obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
